

# THE HAUK FACTOR

## Holiday Lighting

### 'Tis the season for hassle-free Holiday lighting

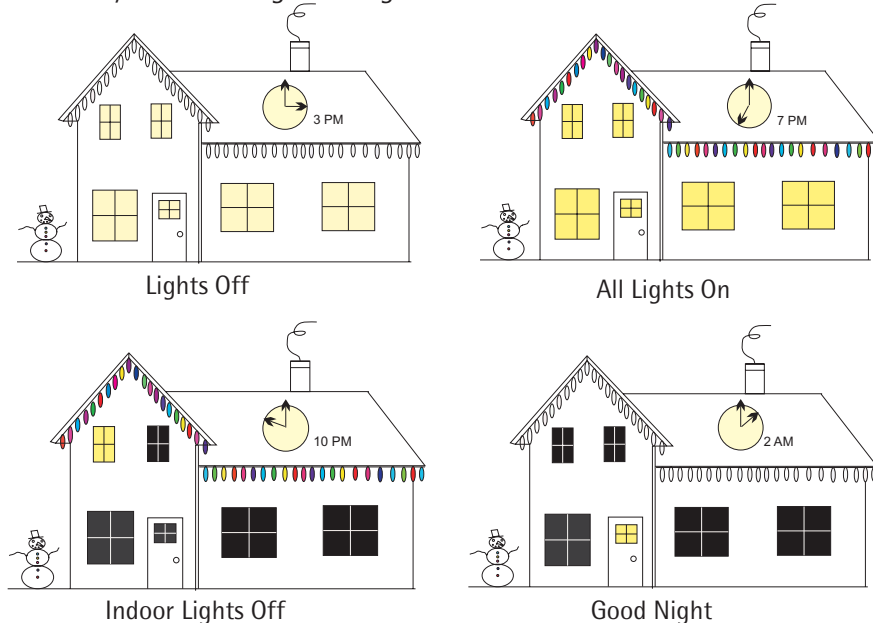

During this season, let PCS show you how to save money, time and enhance your home.

Venturing out in the cold and snow just to turn on/off the Holiday lights is not always enjoyable, and leaving the lights on all night is too expensive!

Plug your seasonal lights into the AM1, Appliance Module. Now plug a KPCD Desktop Keypad into an outlet. You now have one touch control of your lighting. Then, plug your indoor decorations (like a Christmas Tree) into the LM1, Lamp Module for full control of indoor lights (on/off/dim etc.).

Better yet, with the DDT Desktop Daily Timer, you may program the lights to automatically come on at Sunset and turn off at bedtime.

The on/off times may vary so it appears someone is home and never worry whether you left the lights on again.

**Are you** visiting relatives this season, attending a Holiday party or going on vacation... program the lights to automatically turn on at different times of the night for a lived-in look.

Powerline Control Systems, the Inventor of UPB Lighting and Automation Technology has been developing products since 1992.

UPB (Universal Powerline Bus) is our latest innovation that uses the existing powerlines in a home to communicate between devices.

PulseWorx, the perfect fit for existing home retrofit and remodeling installations.

### Benefits

**Convenience** - Don't worry about turning off the lights at night, it's automatic.

**Green** - The holidays are a huge drain on the power bill. Don't waste power or money this season.

**Safety and Security** - Don't come home to a dark house and create a lived in look even while on vacation.

### Pick Your Parts

#### DDT - Desktop Daily Timer

(Tabletop controller with custom timer)

#### KPCD - Desktop Keypad

(Tabletop keypad controller)

#### AM1 - Appliance Module

(12 Amp relay module)

#### LM1 - Lamp Module

(400 Watt dimming module)

#### PPC-(1,3,4) - Phase Coupler

(Connects the phases in an electrical panel)

**The Hawk Factor** is a series of applications that can be accomplished with PulseWorx products.

There is no single application for every customer. Just like their homes, applications come in many different sizes and styles.

Take a look at our ever expanding collection, I'm sure you'll agree that PulseWorx UPB systems offer the flexibility, reliability and profitability that you need for systems today.
